Communication manager

Project

Ecological impact

Gain of time and easier access

Economical impact

Purpose: Simplify and secure student identification through a digital university card that eliminates lines, reduces risks, and improves the student's daily experience.

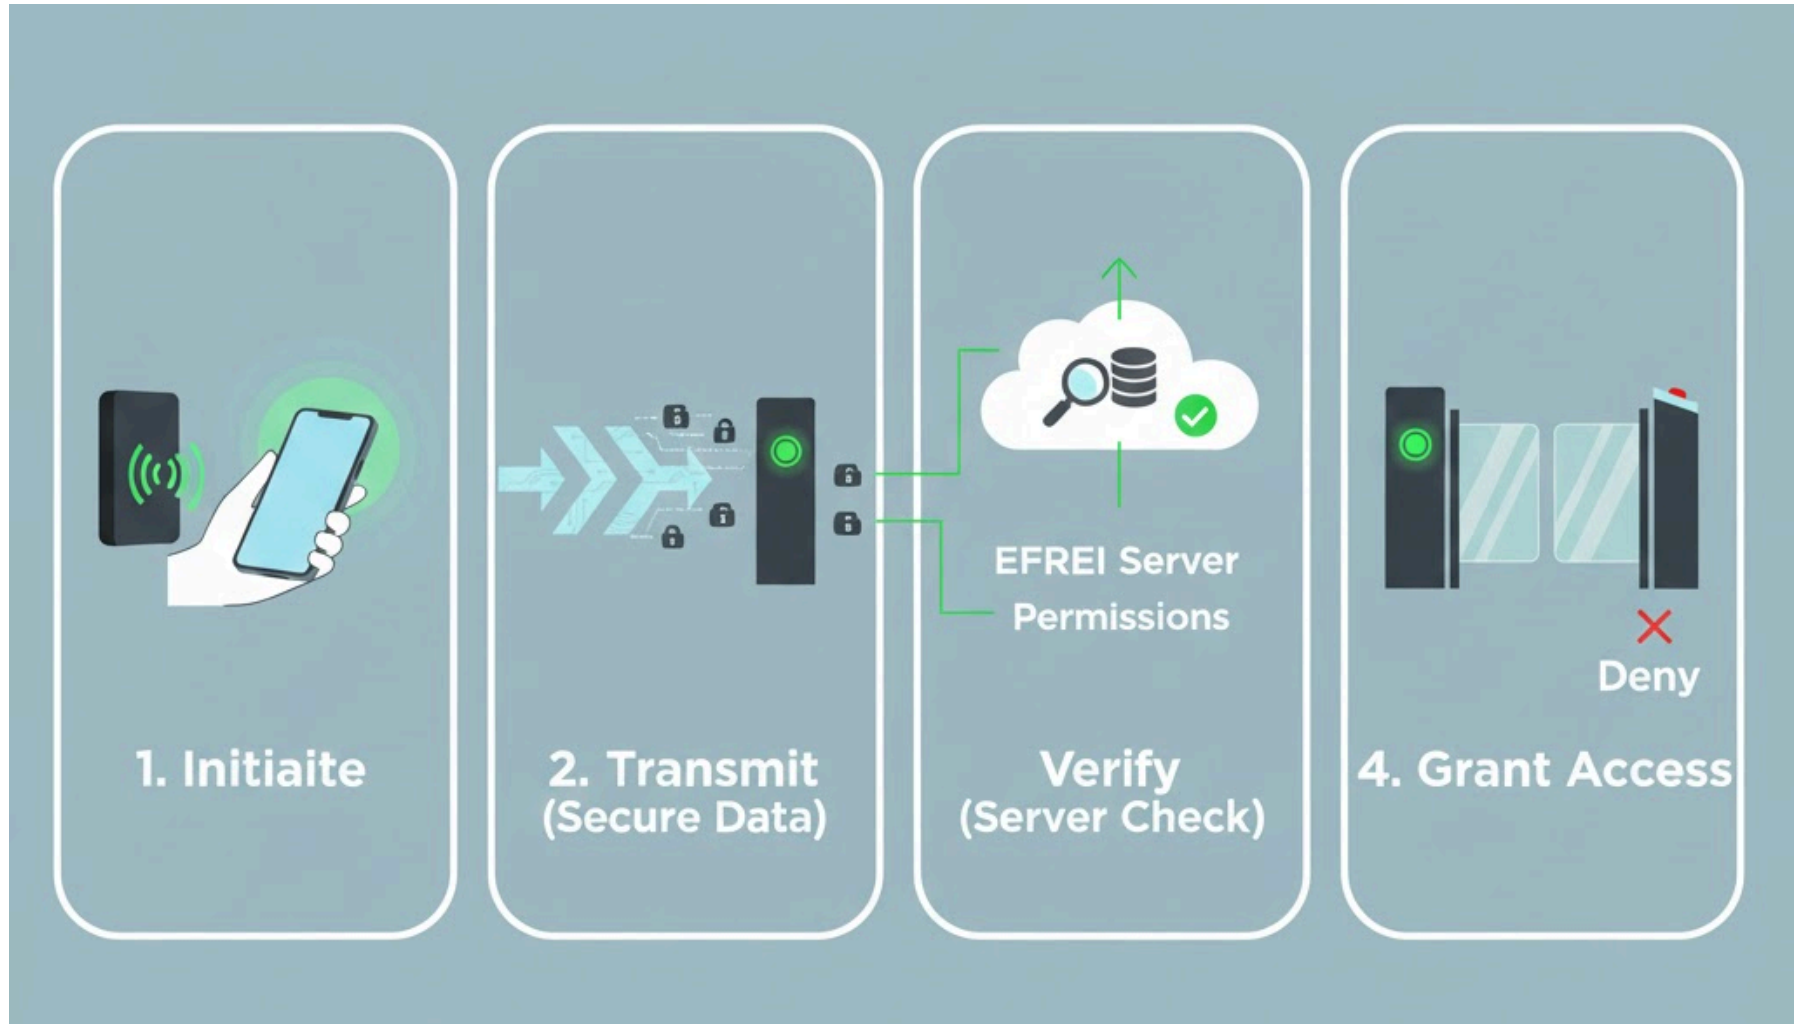

Early adopters

- EFREI students
- Professors
- EFREI staff
- Guests (guided campus tours, guided parent tour, conferences, etc.)

Contacts

Prénom et Nom + lien Profil LinkedIn/FB	Profil	Mode de contact (visio/RDV/ ...)	Intérêt pour le projet
Michael MAGUED https://www.linkedin.com/in/michaelmagued/	Teacher at EFREI	RDV at EFREI	
Rochet GABRIEL	Student at EFREI	RDV at EFREI	
Erwann BRIOT	Student at EFREI	RDV at EFREI	

Maquette

1^{er} interview

First Name : Gabriel Name : Rochet

Education : currently Efrei Paris student

Past projects : Founder of PAXO phones

1. Understanding his context

Gabriel is a student in 2nd year at Efrei Paris. He regularly goes to Efrei buildings and uses his card. He once lost his Efrei card. He is passionate of IT and has lots of knowledges as the success of his PAXO project says it all.

2. Discussing his expectations

Gabriel thinks MyCard project has a bright future as it concerns the totality of the Efrei staff and students. It has lots of benefits. The first thing he liked was the fact it would prevent losses as he was once concerned about that.

2nd interview

First Name : Erwann Name : Briot

Education : Student at EFREI Paris

Past projects : Funny Granny game

1. Understanding his context

Erwann, a second-year Efrei Paris student, frequently accesses the campus buildings using his student card, which he once misplaced.

2. Discussing his expectations

ERWANN believes the MyCard project holds significant promise, as it impacts the entire Efrei staff and student body and offers numerous benefits. He particularly values its potential to prevent card losses, a concern he once personally experienced.

Persona

Michael Magued - Efrei teacher

Education : Telecom Paris

Specialisation: Digital systems and electronics

Occupation: Teacher at EFREI

Place of residence: France

The needs :

- Better efficiency at the gates
- Maintain security
- Easy to implement in today's system

« Nowadays, everyone has his phone nearby : it sure would be faster to access it on the app... »

« If security is still maintained, then it's definitively a good idea »

User problem

W hat ? : Entering in a campus at EFREI

W ho ? : EFREI students and staff.

W here ? : Across all EFREI campus locations.

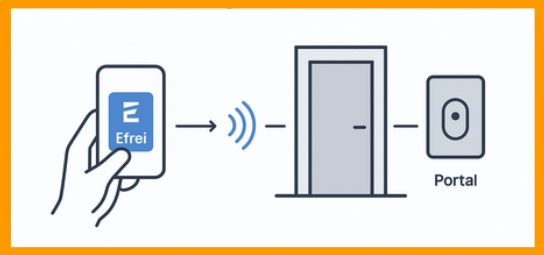

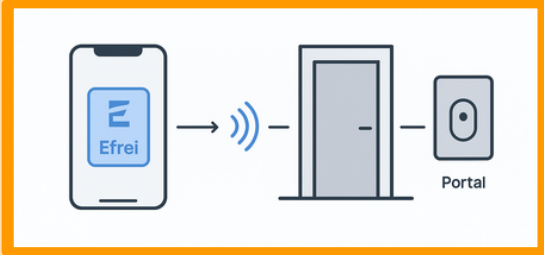

W hen ? : At any time

H ow ? : By scanning the EFREI identification card.

W hy ? : Because the current process is slow, requires carrying the physical card at all times, and creates long waiting lines if the card is forgotten or needs to be scanned repeatedly.

The issue : Take the EFREI card and scanning it is long and we can't forget it.

Comparing Solutions

	Current access	MyCard
Competing solutions		
Strengths	-It doesn't depend on a phone or battery. -Low chance of technical failures. -Already developed	-Easy access as long as you have your phone. -Lower risk of loss or damage. -Ecological benefits -Reduces lines and speeds up identification. -Lower risk of loss or damage.
Weaknesses	-It can be lost, damaged, or forgotten. -It requires printing and physical distribution. -Long lines and slower processes when verifying it.	-Depends on having battery and a working phone. - Risk of technical issues, app errors, or slow loading. -Needs time to implement
